Successful speaking and understanding requires mechanisms for reliably encoding structured linguistic representations in memory and for effectively accessing information in those representations later. Studying the time-course of real-time linguistic dependency formation provides a valuable tool for uncovering the cognitive and neural basis of these mechanisms. This volume draws together multiple perspectives on encoding and navigating structured linguistic representations, to highlight important empirical insights, and to identify key priorities for new research in this area.

This book brings together twelve previously unpublished language profiles based on the original Language Assessment, Remediation and Screening Procedure (LARSP). The languages featured are: Afrikaans, Bulgarian, Cantonese, Finnish, Greek, Hindi, Hungarian, Japanese, Kannada, Korean, Malay and Swedish. Each chapter includes a grammatical sketch of the language, details of typical language development in speakers of the language, as well as a description of and justification for the profile itself. The book will be an invaluable resource for speech-language pathologists and others wishing to analyse the grammatical abilities of individuals speaking one of these languages. This new collection complements a previous book in this series on the same theme: *Assessing Grammar: The Languages of LARSP* (Ball et al., 2012,).

Researchers, educators, professional organizations, administrators, parents, and policy makers have increased their involvement in the assessment and evaluation of early childhood education programs. This interest has developed swiftly during the last decades. The National Association for the Education of Young Children (NAEYC) and the National Association of Early Childhood Specialists in State Departments of Education (NAECS/SDE) developed a position statement titled, " Early childhood curriculum, assessment, and program evaluation: Building an effective, accountable system in programs for children birth through age 8, " to address related trends, issues, guiding principles, and values. Appropriate and well-designed evaluations need to address several audiences including researchers, educators, policy makers, children, and parents. They need to encourage the implementation of a strong foundation that improves the quality of the children ' s education. Child assessment and program evaluation can lead to effective results and better accountability for preschool, kindergarten, and primary school programs. The purpose of this volume is to share a collection of research strands on contemporary perspectives on research in assessment and evaluation in early childhood education. It provides a review and critical analysis of the literature on assessment and evaluation of programs, children, teachers, and settings. The volume begins with a brief introductory chapter that presents the reader with a map of the area, laying out the issues and alternatives, and linking these to the chapters that follow. It addresses several areas including (1) understanding assessment and evaluation with young children, (2) schools and assessment implications, (3) teacher evaluation and professional development, (4) social relationships and assessment, (5) content areas in early education assessment, (6) technology and assessment, and (7) conclusion with future research directions in assessment and evaluation in early childhood education. The volume is of interest to researchers, educators, policy makers, university faculty, graduate students, and general readers who are interested in research on assessment and evaluation in early childhood education. The chapters are authored by established scholars in the field.

Interpret the WISC–V to help diagnose learning disabilities and to translate profiles of test scores to educational action The Wechsler Intelligence Scale for Children—Fifth Edition (WISC–V) is a valuable tool for assessing children and adolescents with learning disorders—and Intelligent Testing with the WISC–V offers the comprehensive guidance you need to administer, score, and interpret WISC–V profiles for informing diagnoses and making meaningful educational recommendations. This essential resource provides you with cutting-edge expertise on how to interpret the WISC–V, which has an expanded test structure, additional subtests, and an array of new composites. Intelligent Testing offers valuable advice from experienced professionals with regard to clinically applying the WISC–V in an effort to understand a child's strengths and weaknesses—and to create a targeted, appropriate intervention plan. Ultimately, this book equips you with the information you need to identify the best theory-based methods for interpreting each child's profile of test scores within the context of his or her background and behaviors. Intelligent Testing provides a strong theoretical basis for interpreting the WISC–V from several vantage points, such as neuropsychological processing theory and the Cattell-Horn-Carroll (CHC) model, yet it permits you to interpret children's profiles using simple, straightforward steps. The most frequently used IQ test in the world, the WISC–V (like previous versions of the WISC) plays an integral role in evaluating children for learning and intellectual disabilities, developmental and language delays, and gifted and talented classifications. As such, understanding how to use the latest version of WISC is extremely important when assessing children and adolescents ages 6 to 16 years. Explore all aspects of both the conventional WISC–V and WISC–V Digital Read objective, independent test reviews of the WISC–V from independent, highly-respected expert sources Review 17 clinical case reports that spotlight experiences of children and adolescents referred to psychologists for diverse reasons such as reading problems, specific learning disabilities, ADHD, intellectual giftedness, and autistic spectrum disorders Learn how a broad-based, multi-faceted approach to interpretation that calls upon several scientific concepts from the fields of cognitive neuroscience, clinical and school neuropsychology, neuropsychological processing, and the CHC model, can benefit children by providing meaningful recommendations to parents, teachers, and often to the children and adolescents themselves Use the results of WISC–V as a helping agent to assist in creating the best intervention plan, rather than allowing test results to dictate placement or labeling Intelligent Testing with the WISC–V is an indispensable resource for professionals who work with the WISC–V, including school psychologists, clinical psychologists, educational diagnosticians, and more.
